Jan De Nul started as a contractor of civil works. Anticipating the market opportunities which arose, the family De Nul took on its first dredging work in 1951. Soon after that, the first international dredging project was secured. The rest is history: over the ensuing years, Jan De Nul Group developed into a world leader in the dredging industry.

Jan De Nul Group is a leading expert in dredging and marine construction activities, as well as in specialized services for the offshore industry of oil, gas and renewable energy. The combination with its civil engineering and environmental activities renders the Group complete.

Octopus Marine is the South Asian Agent of Jan De Nul, since 1999.

TRAINING PROGRAM FOR OUR CREWS

In addition to the above, we have owned airless spray painting machine, high pressure water blasting machine, compressors, generators, heavy lifting cranes, forklifts, trailers for container transportation, and training yard for trainees where a lot of blasters/painters are taking training for how to operate the machine, safety, trouble shooting, etc.

Our training yard with equipment:

Our spacious training yard is situated in Chennai, an industrial area, 10 km from the Chennai Port where we have installed the HP water blasting machine & spray painting machine, etc. We possess brand new Hydrojetting machine (Eclipse BC-EL 20) & painting machine imported from Heatec (Asia Pacific) Pte Ltd, Singapore. Max Working pressure: 15000 psi (1000 bar). The lightweight of 460 kg and compactness of the Eclipse high-pressure machine makes it easy to be used onboard for the surface preparation on deck and in ballast tank.

We are conducting practical training in this yard thro' HP water blasting machine, spray painting machine & model DB tank for the trainees.

Based on NSSPL diagram of model DB tank, we have fabricated the DB tank of size Length (13foot) X Breath (13foot) X Height (7 foot). This model tank is exclusive for training purpose & the DB tank idea is to create the work environment i.e. to remove the rust/unwanted foreign matters existing on surface quickly in the tank of the vessels in-order to save time/money.
